DETAIL A

SCALE NTS

PROFESSIONAL SUMMARY

Telecom billing mediation and revenue assurance engineer: **14 years** as Sprint's highest-tier SME for wireless and wireline mediation (Nortel, Ericsson, Lucent AMA/CDR data), then senior infrastructure automation at Jabil and Raymond James. Saved **\$2M** with an EDR routing application, raised mediation throughput **250%**, cut alarm MTTR **50%**, and led a **\$50M, 130-switch** platform replacement. **25 years** of production Linux with Ansible, Terraform, Docker, Kubernetes, CI/CD and ELK; fluent in Python, Perl, C and shell.

KEY ACHIEVEMENTS

- Saved **\$2 million annually** by designing and leading development of an automated Event Data Record (EDR) routing application that collected switch usage records and distributed them to rating, billing, fraud and analytics systems (Sprint).
- Increased billing mediation throughput **250%** by re-architecting record processing across parallel processors (Sprint).
- Cut alarm mean-time-to-resolution **50%** by building observability and alerting on the ELK Stack across multiple mediation platforms (Sprint).
- Led the **\$50M** replacement of Sprint's legacy billing mediation system (Marconi CEOS) with Openet FusionWorks across **130 switches** - requirements, RFP, **12-vendor** evaluation and selection.

PROFESSIONAL EXPERIENCE

VIMOPS | Kansas City, MO (Remote)

Founder & CEO / DevOps Engineer | May 2020 - Present

- Founded and run an IT services firm serving **30+ client organizations** with custom software (Python, PHP), web development and digital marketing for small businesses and federal contracts (registered vendor, CAGE 8PMQ9).
- Cut client deployment times **70%** by automating infrastructure with Ansible, Terraform, Docker and CI/CD (GitLab CI, GitHub Actions) across AWS, Azure and GCP, improving multi-cloud reliability.
- Reduced deployment-related service disruptions **90%** by refactoring a client's legacy monolith into containerized microservices.

Sabbatical, international travel (Indonesia, Malaysia, Vietnam, Cambodia; conversational Bahasa Indonesia) | May 2019 - Feb 2020

JABIL | St. Petersburg, FL

Senior Infrastructure Automation Engineer | Mar 2018 - May 2019

- Reduced deployment time for critical iFactory infrastructure by **50%** by building CI/CD build and release pipelines in Azure DevOps and Octopus Deploy with automated testing gates.
- Cut new-developer onboarding time **30%** by containerizing all iFactory applications with Docker - breaking siloed apps into microservices - and deploying them on Kubernetes across **approx. 112 manufacturing plants**.
- Reduced manual configuration time **70%** with a comprehensive Ansible playbook library for deploying, configuring and maintaining on-premises and cloud resources.

Sabbatical, U.S. travel and independent study of DevOps practices and Infrastructure as Code | May 2017 - Mar 2018

RAYMOND JAMES | St. Petersburg, FL

System Administrator (Contract), Capital Markets | Feb 2017 - May 2017

- Anchored Linux SME and Tier III application administration for the Capital Markets team's GBST Syn back-office trade-processing suite in a highly regulated financial environment.
- Cut release deployment times **50%** with Ansible playbooks and Jenkins pipelines that automated releases across test and production environments with consistent configuration.

NOTES

- ALL FIGURES ARE PRODUCTION RESULTS VERIFIED BY THE CANDIDATE.
- RED FIGURES ARE MEASURED OUTCOMES; BOLD BLACK FIGURES ARE SCALE, TENURE AND REPEATS. RED UNDERLINED TEXT IS A LIVE LINK.
