DETAIL A

SCALE NTS

PROFESSIONAL SUMMARY

Telecom billing mediation and revenue assurance engineer: **14 years** as Sprint's highest-tier SME for wireless and wireline mediation (Nortel, Ericsson, Lucent AMA/CDR data), then senior infrastructure automation at Jabil and Raymond James. Saved **\$2M** with an EDR routing application, raised mediation throughput **250%**, cut alarm MTTR **50%**, and led a **\$50M, 130-switch** platform replacement. **25 years** of production Linux with Ansible, Terraform, Docker, Kubernetes, CI/CD and ELK; fluent in Python, Perl, C and shell.

KEY ACHIEVEMENTS

- Saved **\$2 million annually** by designing and leading development of an automated Event Data Record (EDR) routing application that collected switch usage records and distributed them to rating, billing, fraud and analytics systems (Sprint).
- Increased billing mediation throughput **250%** by re-architecting record processing across parallel processors (Sprint).
- Cut alarm mean-time-to-resolution **50%** by building observability and alerting on the ELK stack across multiple mediation platforms (Sprint).
- Led the **\$50M** replacement of Sprint's legacy billing mediation system (Marconi CEOS) with Openet FusionWorks across **130 switches** - requirements, RFP, **12-vendor** evaluation and selection.

TECHNICAL SKILLS

Telecom billing / mediation: billing mediation, revenue assurance, CDR/EDR/AMA usage-record pipelines, rating and charging, Nortel / Ericsson / Lucent switch data formats, BSS/OSS, mediation rules, data reconciliation, Tier III production support, root cause analysis, ETL, Oracle SQL

Unix / Linux / OS: RHEL, CentOS, Debian, Ubuntu, HP/UX, Solaris, FreeBSD, Red Hat Satellite, Windows Server, Active Directory / IAM

laC & configuration management: Terraform, Ansible (playbooks, roles, YAML, Jinja2), CloudFormation, Puppet, Chef, Salt

CI/CD & version control: Azure DevOps, GitHub Actions, GitLab CI/CD, Jenkins, Octopus Deploy, Git, pull-request code review and branching/tagging strategy; canary / A-B / blue-green deployment

Cloud, containers & virtualization: AWS (EC2, S3, RDS, VPC), Microsoft Azure (VMs, Storage, Virtual Networking, Azure DevOps), Google Cloud Platform, hybrid cloud, Docker, Kubernetes, microservices, KVM, VMware ESX/vCenter/Horizon

Monitoring & observability: ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Dynatrace, Prometheus, Grafana, centralized logging, alerting and dashboards, SLOs/SLIs, on-call incident response, postmortems and root cause analysis (RCA), SRE practices

Programming & scripting: Python, Perl, PHP, Ruby, C / C++ / C#, Java, JavaScript / TypeScript, SQL, bash / korn / zsh, PowerShell; Ruby on Rails, Django, .NET Core, REST API design; Oracle, MySQL, PostgreSQL

Operations & ITSM: on-call and Tier 2/3 escalation, troubleshooting, release and change management, capacity planning, backup and disaster recovery, SOPs and runbooks, vendor management, ITIL, SDLC (Agile, Scrum, Waterfall), Jira Service Management, Confluence

PROFESSIONAL EXPERIENCE

VIMOPS | Kansas City, MO (Remote)

Founder & CEO / DevOps Engineer | May 2020 - Present

- Founded and run an IT services firm serving **30+ client organizations** with custom software (Python, PHP), web development and digital marketing for small businesses and federal contracts (registered vendor, CAGE 8PMQ9).
- Cut client deployment times **70%** by automating infrastructure with Ansible, Terraform, Docker and CI/CD (GitLab CI, GitHub Actions) across AWS, Azure and GCP, improving multi-cloud reliability.
- Reduced deployment-related service disruptions **90%** by refactoring a client's legacy monolith into containerized microservices.

Sabbatical, international travel (Indonesia, Malaysia, Vietnam, Cambodia; conversational Bahasa Indonesia) | May 2019 - Feb 2020
